Sage 100 REST API

Connect Your Sage 100 Data—Securely and Simply

The Sage 100 REST API makes it easier to link your Sage data to other tools you already use—without giving up control or security. Whether you're feeding dashboards, syncing e-commerce orders, or building reports, this API helps you do more with the tools you trust.

Key Features

- **Read access** to vital tables:
    - System: Users, Salespeople, Warehouses
    - Core Business: Customers, Vendors, Invoices, Sales Orders, Purchase Orders, RMAs
    - Supporting Data: Contacts, Item Warehouses, Ship-to Addresses, and more
- **Write access** to:
    - Customers and Vendors (and their Contacts)
    - Sales Orders and Purchase Orders
    - Ship-to Addresses and RMAs
- **Expandable access**
    Additional GET/POST functions can be enabled for additional objects – as long as they live inside Sage's newer framework.

Pricing

- **$2,700/year for one company code**
    - Need access to more Sage 100 companies under the same license (e.g. a test company)? Enable the REST API on those companies for $360/company/year.
- $1,200 fixed-fee <u>per endpoint</u> cost to add additional endpoints not available out-of-the-box.

Setup

- **Installed directly on your Sage 100 server**
- **Secured by Cloudflare Zero Trust**
    - Only the REST API is exposed – keeping everything else safely protected.
- **Must be on a supported version of Sage 100**: <u>Sage 100 Supported Versions</u>

This API removes headaches for developers and creates a pathway for your Sage 100 system to easily connect with web-enabled applications. No more brittle workarounds. Just a clean, secure way to keep your systems synchronized and your business moving forward.

The Sage 100 REST API is owned and developed by Friendly Systems, Inc. - solely distributed by Malik, Inc.
